Customer Journey Map

A Customer Journey Map represents the user's interaction with the Flood Prediction System, from accessing the application and entering data to receiving flood predictions and safety recommendations, ensuring a smooth and effective user experience.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Collect rainfall and weather data. - Enter weather parameters into the system. - Submit the data for analysis.	- Click Predict. - View flood prediction. - Analyze flood probability.	- Issue flood warnings. - Plan evacuation. - Allocate emergency resources.
Touchpoint <i>What part of the service do they interact with?</i>	- Flood Prediction Web Application - Weather Data Input Form - Dashboard	- Prediction Dashboard - Machine Learning Model - Prediction Results Page	- Alert Notification System - Disaster Response Dashboard - Emergency Communication

Customer Thought <i>What is the customer thinking?</i>	• "Is the weather data accurate?" • "Will the system predict floods correctly?"	• "Is there a flood risk?" • "How accurate is this prediction?"	• "How can we protect people from the flood?" • "Are enough resources available
	• "Can I rely on these predictions for planning? "	• "Can I rely on these predictions for planning?"	- for emergency response?" • "How can we minimize damage and ensure public safety? "
Customer Feeling <i>What is the customer feeling?</i>	• Curious • Hopeful • Alert	• Concerned • Confident • Prepared	• Responsible • Urgent • Relieved after taking action
Process Ownership <i>Who is in the lead on this?</i>	• Meteorologist • Disaster Management Officer	• Machine Learning System • Disaster Management Team	• Government Authorities • Disaster Response Teams • Local Administration
Opportunities <i>How can we improve this stage?</i>	• Automatic weather data collection. • Real-time weather updates. • Better user interface.	• Improve prediction accuracy. • Faster prediction response. • Better visualization of results.	• SMS and mobile alerts. • Integration with weather APIs. • Cloud deployment for 24/7 availability.
