

Demonstration of Proposed Features

Date	04 July 2026
Team ID	
Project Name	Rising Waters – AI-Powered Flood Prediction & Early Warning System
Maximum Marks	1 Mark

Demonstration of Proposed Features:

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Flood Risk Prediction	Predicts flood risk using Machine Learning models trained on historical flood and weather data.	Implemented	Yes	Successfully predicts flood risk.
2	Web-Based User Interface	Allows users to enter flood-related parameters and receive prediction results through a Flask web application.	Implemented	Yes	User-friendly interface completed.
3	Machine Learning Model Selection	Compares multiple ML algorithms (XGBoost, Random Forest, KNN, Decision Tree) to select the best-performing model.	Implemented	Yes	Best model selected based on evaluation metrics.
4	Prediction Result Display	Displays the predicted flood risk clearly on the results page.	Implemented	Yes	Prediction output verified successfully.
5	Real-Time Weather API Integration	Retrieves live weather data for dynamic flood prediction.	Partial	No	Planned as a future enhancement.
6	Early Warning Notification System	Sends automated flood alerts to users through notifications.	Pending	No	Planned for future implementation

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	4
Total Features Demonstrated	4

Overall Implementation Rate (%)	67%
